

NEW

The new modern recycling and washing plant at Gill Mill Quarry, Oxfordshire

windrush **eco** range

Smiths have made a substantial investment in a new washed recycling plant, enabling us to recycle more waste, more efficiently. The new state of the art equipment has been installed at the Gill Mill quarry, near Witney, Oxfordshire and has now started production of quality washed recycled aggregates. This new Windrush ECO range takes its name from the River Windrush which flows peacefully through the Gill Mill quarry.

Smiths have been recycling waste material from the construction industry for many years. With this new washing facility it enables the production of washed recycled aggregates to both supplement and complement Smiths' primary washed sands and gravels; in addition to the existing range of recycled crush concrete, hardcore and soils.

This new recycling facility has the capability to produce top quality washed recycled aggregates. A strict policy of inspection, testing and segregation ensures that product quality is maintained throughout the production of recycled aggregates.
